DHH Reopens Oyster Harvesting Area 28

Reopening Allows Harvesters Additional Time to Gather Oysters

BATON ROUGE - The Louisiana Department of Health and Hospitals announced today that it will reopen oyster harvesting Area 28 to give harvesters as much time as possible to harvest their product before any potential impact from the BP oil spill in the Gulf.

Area 28, which is west of the Mississippi River in Iberia Parish, was originally closed May 18, 2010. The area was closed as a

precaution in anticipation of oil intrusion. There has been no intrusion as of yet in the partially reopened area, and DHH officials continue to monitor the area, as well as an entire 8-million acre area off the Louisiana shoreline.

In addition to continued monitoring, oyster harvesters "taste test" the oysters as they are pulled from the water to make sure their product is good. Harvesters and dealers test oysters in order to provide the most wholesome product and highest-quality product available to the public.

DHH Secretary Alan Levine and State Health Officer Dr. Jimmy Guidry on Monday signed the order to reopen Area 28, which will take effect at sunrise May 25.

DHH officials have been working closely with local, state and federal agencies to monitor the oil plume that continues to grow off of the Louisiana coastline for its

potential impacts on oyster harvesting areas.

In addition to regular testing schedules, DHH scientists and engineers are conducting enhanced testing of oyster meat taken from the closed beds to monitor the presence of oil. Oysters being harvested in areas open for harvesting have been deemed safe by DHH.

Areas 8 through 15, 17, 19 and 21 through 23 remain closed. Closures will remain in effect until officials have determined that environmental conditions are within the requirements specified by the National Shellfish Sanitation Program.

The public is encouraged to call a toll-free hotline, 1-800-256-2775, to report the presence of oil or an oil sheen.
